

	14/07	15/07	16/07	17/07	18/07	19/07	20/07	21/07	22/07
Initial Setup	Define the problem Plan the structure and logic of the code								
Creating Basic Functions	Create the grid and validate input	Generate grid with unumbered cells							
Implementing Core Functionality				Add dirt to cell based on user input	Set starting position of the cleaner				
Developing Cleaning Logic					Develop logic for moving the cleaner and cleaning the cells				
Testing and Debugging								Testing and debugging	
Finalising									Final code review and documentation Prepare for submission
